PRISTINE IMAGE WELLNESS

The Hidden Root Cause Behind Weight Gain, Fatigue & Chronic Disease

A clear, science-backed guide to understanding insulin resistance, metabolic dysfunction, and how to start restoring your metabolism naturally.

What most people mistake for aging,
lack of willpower, or bad habits may
actually be a metabolic issue.

MEET THE FOUNDERS

Welcome

We're **Troy & DeOnn Wallace**,
founders of Pristine Image Wellness.

We didn't begin as health coaches –
we began as patients searching for
real answers.

Troy was dealing with **inflammation**,
blood pressure issues, **neuropathy**,
and **metabolic dysfunction**. DeOnn was
struggling with **energy crashes**, **IBS**,
eye floaters, and **chronic fatigue**.

When we discovered **insulin resistance**
was the root issue behind so many
symptoms, everything changed.

The Feel Great Protocol helped us
restore our health first, and now
we help others do the same through
education, **coaching**, **community**,
and a **simple metabolic system** that
works with the body — not against it.

This guide is our way of helping you
take the first step toward clarity,
hope, and healing.

*You are not broken.
Your body was
designed to heal.*

Troy & DeOnn Wallace

WHY EVERYTHING ELSE HAS FAILED

Stop Fighting Your Body

Most solutions focus on symptoms.
Real progress starts when you address
the metabolic root cause and **work with**
your biology instead of against it.

Old Way

- ✗ Calorie counting
- ✗ Starving between meals
- ✗ White-knuckling cravings
- ✗ Endless cardio
- ✗ Temporary motivation

New Way

- ✓ Stabilize blood sugar
- ✓ Lower insulin
- ✓ Restore satiety
- ✓ Support metabolic flexibility
- ✓ Use simple sustainable habits

This isn't a willpower problem.
When insulin improves, **everything changes** —
energy, hunger, mental clarity, and weight
regulation all begin to move in the
right direction.

88%
of Americans
are metabolically
unhealthy.

Understanding the Hidden Root Cause

If your body feels like it's working against you, the issue may be deeper than calories or willpower. Insulin resistance is a form of metabolic dysfunction that can quietly disrupt energy, hunger, fat storage, and long-term health.

What's Happening Inside the Body?

-  You eat food and blood sugar rises.
-  Insulin acts like a key to help glucose enter your cells.
-  When cells stop responding well, glucose stays elevated and insulin stays high.
-  The body shifts into storage mode — leading to fatigue, cravings, belly fat, and brain fog.

Common Signs

-  Energy crashes
-  Stubborn belly fat
-  Sugar cravings
-  Poor sleep
-  Brain fog

THE SOLUTION

The Feel Great Protocol

The goal isn't another diet. It's a structured metabolic reset designed to help lower insulin, stabilize blood sugar, support natural GLP-1 activity, and restore your energy from the inside out.

THE 4 PILLARS OF METABOLIC RESTORATION

1.

Time-Restricted
Eating (16:8)

2.

Glucose Curve
Management

3.

Natural GLP-1
Support

4.

Movement &
Recovery

41%
increase in
natural GLP-1

37%
reduction in
glucose spikes

12%
less glycemic
variability

Clinically studied • simple to follow • sustainable

What You Get

The Feel Great Protocol

Wellness community access

90-day challenge support

Education & accountability

What Changes

More stable energy

Fewer cravings

Better sleep & clarity

Sustainable
metabolic progress

THANK YOU FOR INVESTING IN YOUR HEALTH

Take the Next Step Toward Metabolic Healing

You don't need more guesswork. You need clarity, a simple plan, and support that helps you work with your body. A metabolic assessment can help you understand what may be keeping your body in storage mode and what to do next.

- ✓ Identify your biggest metabolic roadblocks
- ✓ Get a personalized reset direction
- ✓ Begin with support, education, and accountability

“

“This is biology, not motivation. When you lower insulin and support the body well, healing becomes possible.”
