

SOP

Title: Connect & Verify Custom Domain and Sender Email in Systeme.io (GoDaddy) – SOP

Frequency: Per Launch

Outcome:

- Custom domain is successfully connected to Systeme.io.
- Domain is authenticated for email sending.
- Sender email is verified and available for use in Systeme.io workflows and email campaigns.

Steps:

- Log in to Systeme.io.
- Go to Settings → Custom Domains.
- Click Add Domain and enter the client's domain.
- Copy the DNS records generated by Systeme.io.
- Log in to GoDaddy.
- Open Domains → Manage → DNS for the selected domain.
- Update the existing WWW CNAME record with the value provided by Systeme.io.
- Add the additional CNAME record provided by Systeme.io.
- Configure HTTPS Domain Forwarding (301 Permanent Redirect) to the www version of the domain.
- Wait until the custom domain status changes from Pending to Ready to Use.
- In Systeme.io, go to Settings → Emails.
- Click Click here to authenticate your domain.
- Enter the domain and click Save.
- Click the Eye icon to display the authentication DNS records.
- In GoDaddy DNS, add all required authentication records:
- Three CNAME records.
- One TXT (_dmarc) record.

- Wait for the authentication status to change to Verified.
- Under Verified Email Addresses, click Click here to confirm your email address.
- Enter the sender email address and click Save.
- Open the verification email and confirm the sender email address.
- Verify the sender email displays Verified with no warning icon.
- Assign the verified custom domain to the funnel under Websites → Sales Funnels → Funnel Settings.
- Test the funnel URL to confirm it loads correctly.

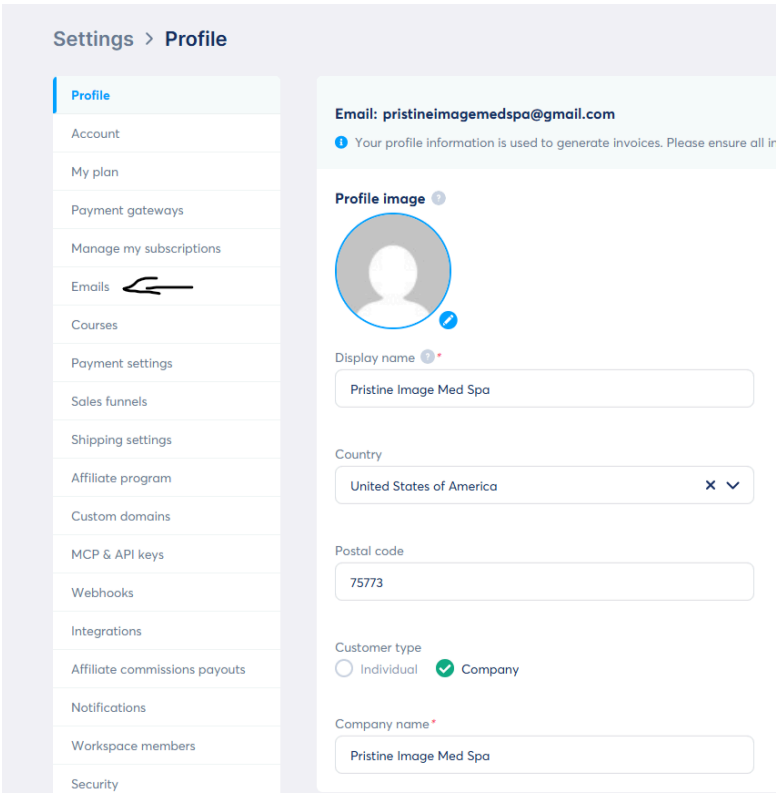

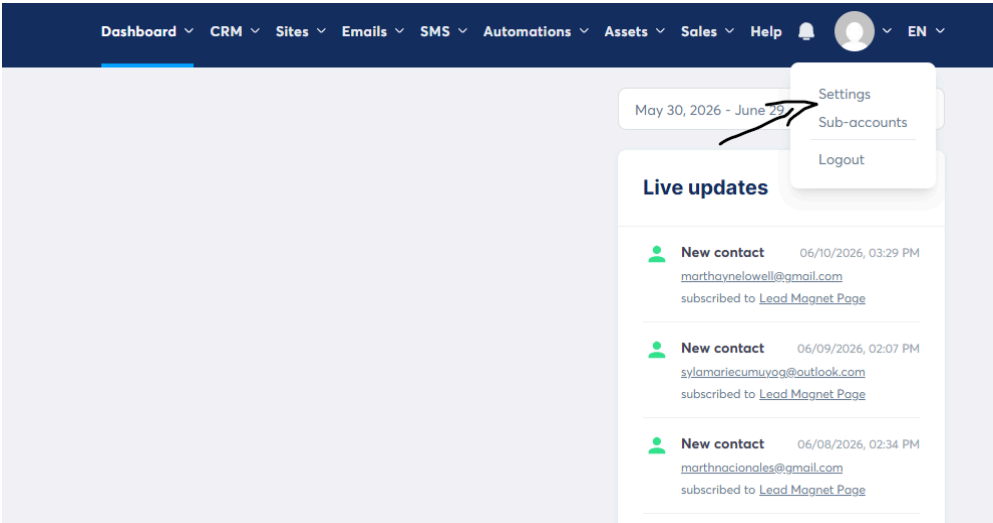

Important: Domain authentication must be completed before the sender email can be selected inside Systeme.io workflows. If the domain is not authenticated, the sender email will display a warning icon and may not send emails properly.

Reference Materials:

- ☐ Custom domain added to Systeme.io.
- ☐ WWW CNAME updated.
- ☐ Additional CNAME record added.
- ☐ HTTPS forwarding configured.
- ☐ Custom domain status is **Ready to Use**.
- ☐ Domain authentication initiated.
- ☐ Three CNAME authentication records added.
- ☐ One TXT (_dmarc) record added.
- ☐ Domain authentication status is **Verified**.
- ☐ sender email verified.
- ☐ Sender email shows **Verified** with no warning icon.
- ☐ Custom domain assigned to the funnel.
- ☐ Funnel URL tested.

☐ test email successfully sent from the verified sender email.

DNSSEC

Forwarding over HTTPS is now available for your domains. We'll automatically apply an SSL certificate to your domain when you set up or edit forwarding, increasing reliability for your domain. It can take a few hours for the SSL to be active.

Forwarding the domain name and/or its subdomains lets you automatically direct your visitors to different places on the web.
