

SOP

Title: Fix Mobile Version of a Funnel/Page – SOP

Frequency: Per Funnel / Per Launch

Outcome:

- Mobile version displays correctly across common phone screen sizes.
 - Desktop design remains unchanged after mobile edits.
 - All sections, spacing, typography, and visibility settings are optimized for a smooth mobile experience.
-

Steps:

1. Open the Funnel

1. Log in to Systeme.io.
2. Open the desired funnel.
3. Click **Edit Page**.

Switch to Mobile View

1. Click the **Mobile (Phone) icon** in the top-right corner of the editor.
 2. Verify the editor is displaying the mobile preview before making changes.
-

3. Edit Mobile-Specific Settings

Only modify settings that display the small **mobile icon** beside them.

Adjust as needed:

- Font size
- Padding
- Margin
- Alignment

- Other mobile-specific settings

These changes affect **mobile only** and will not change the desktop version.

4. Show or Hide Elements

1. Select the element, row, column, or section.
2. Scroll to **Item Visible On**.
3. Choose the correct visibility:
 - Desktop only
 - Mobile only
 - Both Desktop and Mobile

Use this to remove unnecessary content from mobile or create mobile-specific sections.

5. Adjust Column Layout

Select the **Row** containing multiple columns.

If columns should remain side-by-side on mobile:

- Enable **Disable vertically stacking rows on mobile devices**.

If columns should stack vertically:

- Leave this option disabled.
-

6. Reverse Column Order (If Needed)

If the mobile reading order is incorrect:

1. Select the Row.
2. Enable **Reverse row columns on mobile devices**.

Confirm that text and images now appear in the desired order.

7. Review the Entire Mobile Page

Scroll through the full page and verify:

- No overlapping elements
 - Consistent spacing
 - Readable typography
 - Buttons display correctly
 - Images are properly sized
 - No hidden sections appear unintentionally
-

8. Save Changes

1. Click **Save**.
 2. Preview the page on mobile.
 3. Confirm the desktop version remains unchanged.
-

Reference Materials

- Systeme.io Mobile Editor Tutorial
 - Internal Funnel Design Standards
 - Existing Funnel Template
 - Screenshots or Scribe walkthrough (if available)
-

Notes

- Only settings marked with the mobile icon are mobile-specific.
- Settings without the mobile icon affect both desktop and mobile.

- For significantly different mobile layouts, duplicate the section and use **Item Visible On** to create separate desktop and mobile versions instead of forcing one layout to work for both.

4.

Reference Materials:

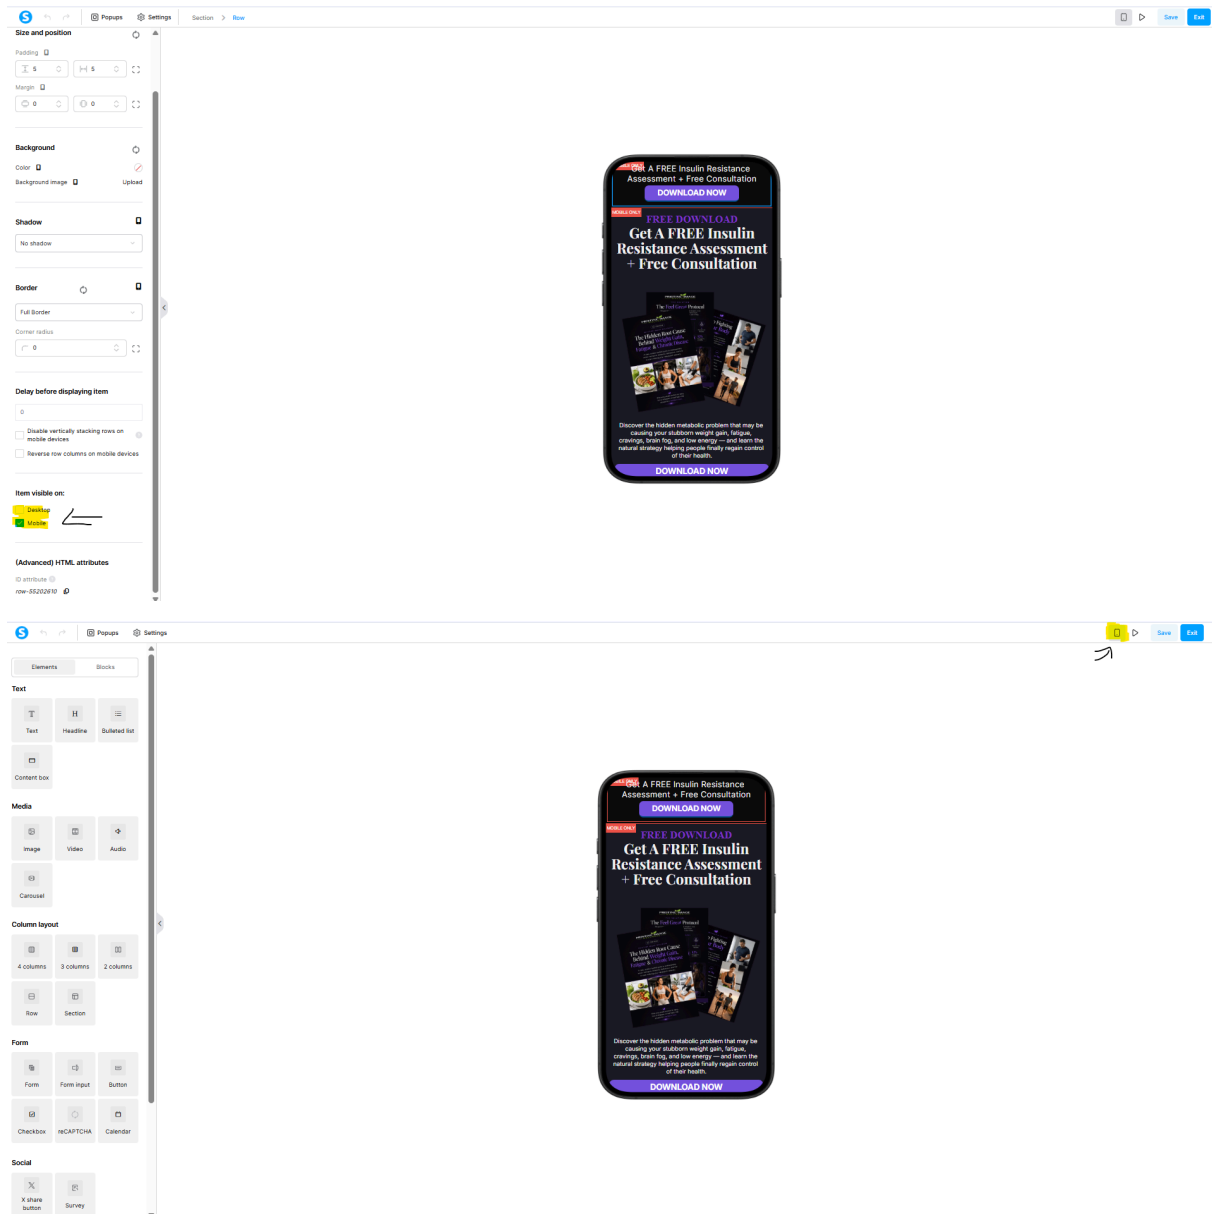

• **Quality Control Checklist**

- Before marking this task as complete, verify the following:
 - ☐ Mobile view has been reviewed from top to bottom.
 - ☐ Only mobile-specific settings (identified by the mobile icon) were edited where appropriate.
 - ☐ Desktop layout remains unchanged.
 - ☐ All text is readable with consistent font sizes and spacing.
 - ☐ Images are properly aligned and scaled.
 - ☐ Buttons display correctly and are easy to tap.
 - ☐ No elements overlap or are cut off.
 - ☐ Hidden elements are correctly configured for Desktop and Mobile visibility.
 - ☐ Row stacking and column order are correct on mobile.
 - ☐ All links and buttons function correctly.
 - ☐ Changes have been saved.
 - ☐ Final mobile preview has been completed before publishing.
- ---

• **Completion Criteria**

- This SOP is considered complete only when every checklist item above has been verified and all changes have been successfully saved.
